# WREN HOUSE No. 1

Here is a wren house that can be built using only the scroll saw. It is a simple project that you can put the boy to work on some rainy evening.

Because of its small size, scrap lumber can be used entirely in its construction. For stock dimensions, refer to the drawing.

Finish the wren house with a coat or two of creosote. When dry, wire it to a tree limb approximately 7' from the ground.
