EDUCATIONAL PULL TOY

Any youngster will get a great kick out of stacking the different shaped blocks on to the dowels of this easy-to-make pull toy. All parts are made of $\frac{1}{2}$ inch thick birch or maple except the wheels, which are $\frac{5}{16}$ inches thick. The dowels can be glued into the base or made to slip in and out. Finish with a non toxic paint or enamel. The blocks should be of different colors.
